#### RICE

- Global rice export for 2021/22 projected in October at 48.7 million MT, which is 0.5% lower than the projection of a year earlier (USDA, October 2021).
- Global rice trade in the calendar year 2022 is projected up from the previous forecast but below the year-earlier record. Much of the anticipated year-to-year global trade Downfall is the outcome of weaker imports of Indian rice by Bangladesh and Vietnam. U.S. exports are also forecast to drop due to tighter supplies and resulting in higher prices. These declines in exports in 2022 are expected to be partially offset by onward exports from Australia, Brazil, Burma, Cambodia, China, EU, Pakistan, Paraguay, Thailand, Uruguay, and Vietnam, with Thailand's exports projected to increase the most. On the global import side, Bangladesh's imports are forecast to drop due to a strong crop recovery.

#### WHEAT

- In the 2021/22, world wheat trade projected in October at about 201.8 million tons, which is 2% higher than the previous year's export (USDA, October 2021).
- Global wheat trade remains robust as wheat continues to be traded despite production concerns and higher export prices. July-June trade year (TY) exports increased with stronger exports for Australia, the EU, and India. Ample supplies, at attractive prices, allows Australia to export to additional markets and become the third-largest exporter (USDA, October 2021).

Source: USDA (Grain: World Markets and Trade, October 2021) rice and wheat; arrows indicate The Direction of export quantities Change: red if more than 10% change from previous year, yellow more than 5% and green less than 5% change. For rice, 2019/20 is calendar year 2020, 2020/21 is calendar year 2021, 2021/22 is calendar year 2022 and so on.

In 2021/22, imports are revised up because of a large revision for Iran. This increase in Iranian is partially offset by decreases to Algeria, the EU, and the United States. Iran received a surge of imports from Russia in 2020/21 and is expected to continue large imports in 2021/22 due to smaller domestic production (USDA, October 2021).
