#### RICE

Global rice export for 2021/22 projected in February at 50.95million MT, which is 1.4% lower than the projection of a year earlier (USDA, February 2021).

- Global rice trade in the calendar year 2022 is projected up overall from the previous forecast but down from the year-earlier record. Much of the expected year-to-year decline in global trade is the result of weaker imports of Indian rice by Bangladesh and Vietnam. Exports in China, Cambodia, and the USA are also projected to drop. These decreases are anticipated to be partially offset by the upward exports from Australia, Brazil, Pakistan, Thailand, Uruguay, and Vietnam.

- Imports in 2022 are projected to drop for Bangladesh, Vietnam, Australia, Brazil, and China while projections for the EU, Colombia, Russia, Saudi Arabia, and Angola's import are expected to increase.

#### WHEAT

- In the 2021/22, world wheat trade projected in February at about 208.4 million tons, which is 5% higher than the previous year's export (USDA, February 2022).

- 2021/22 global trade is higher as trade year (TY) exports increase. India continues to remain competitively priced and has the stocks to supply the global market with more wheat. Exports for Argentina and Brazil are both revised up while Ukraine and the United States partially offset these revisions, as their shipments were weak this past month (USDA, February 2022).

Global trade is forecast higher this month with increased imports for Iraq, Syria, Morocco, Indonesia, Kazakhstan, and the United Kingdom. To cover short domestic supplies, Iraq, Syria, and the United Kingdom are expected to increase their imports (USDA, February 2022).
